

An aerial photograph of a residential roof covered with solar panels. The panels are arranged in a grid pattern, and the roof's surface is visible between the panels. The image is split vertically, with the left side being a dark blue overlay containing text and the right side showing the actual solar panels.

INNOVATIVE MOUNTING SYSTEMS

## THE NEW STANDARD FOR MOUNTING ON SLANTED ROOFS

**CLICKFIT** EVO

STEEL ROOF

## RELIABLE AND EFFORTLESS ASSEMBLY

### ClickFit EVO steel roof; swift and universal

ClickFit EVO steel roof has been specially developed for the professional solar installer. This clear-cut system consists of four components and is universally applicable. With ClickFit EVO you can mount all common solar panels on any type of steel roof. The system's unique features also offer unparalleled flexibility.

### Simple and structured

To save you the effort, the profiles are supplied with pre-punched holes and a pre-plastered EPDM rubber. You attach the compact mounting profiles directly to the trapezoid steel roof - horizontally in a portrait setup and vertically in a landscape setup. The system's clever design means long rails are no longer needed, resulting in savings on transport and storage!

### Connecting with your clients

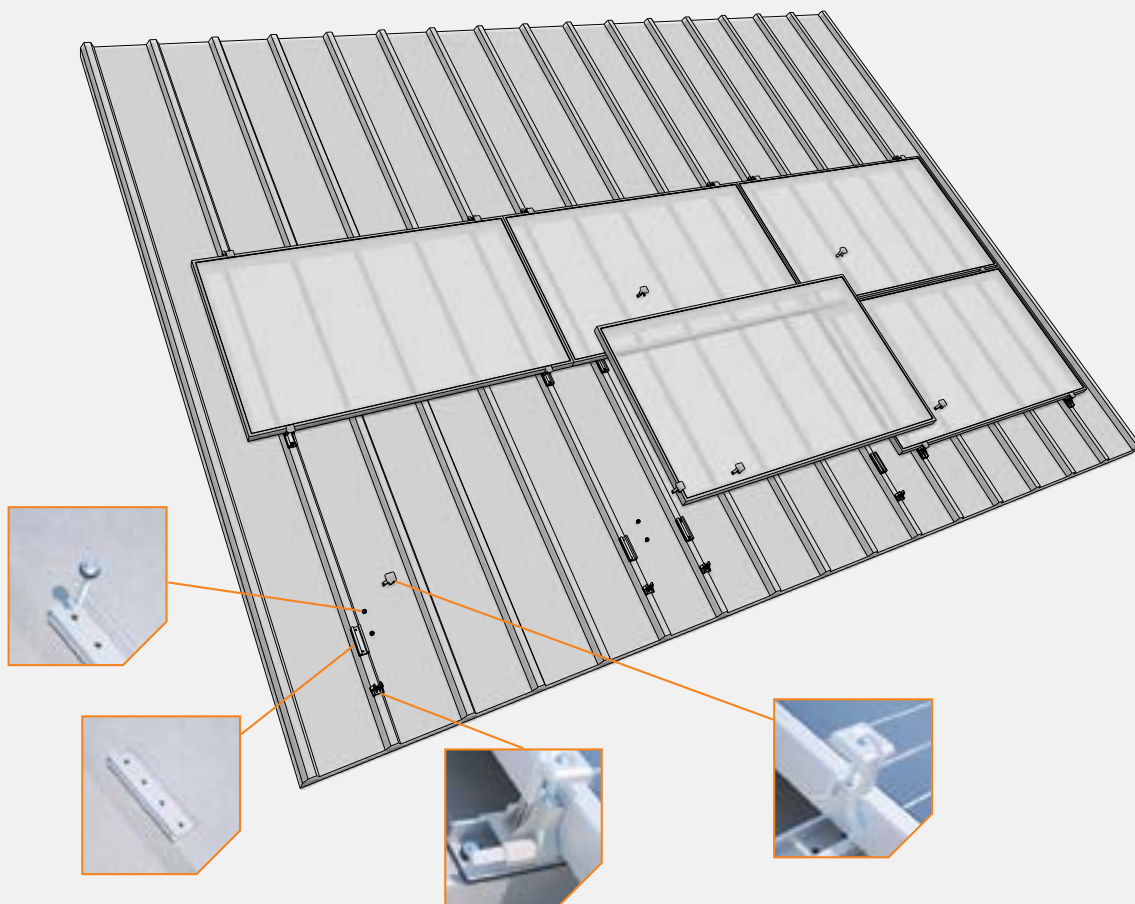

The pre-glued EPDM rubbers on the profiles prevent leakage. On top of that, drilling holes to secure the rails to the roof is now a thing of the past. You need only drill there where the short profiles need to be attached to the roof, meaning the integrity of the roof's structure is compromised less than when installing other mounting systems. This solution is furthermore much more lightweight and therefore less straining.

#### THE ADVANTAGES FOR YOU

- ✓ Pre-punched holes in profiles
- ✓ Only 4 components
- ✓ Strong and lightweight
- ✓ One tool does it all
- ✓ Warranty up to 25 years

#### THE ADVANTAGES FOR YOUR CLIENT

- ✓ Robust base for solar panels
- ✓ No unnecessary drilling
- ✓ Reliable
- ✓ Warranty up to 25 years

## MOUNTING PROFILE & FASTENINGS

## Calculator

The new ClickFit EVO calculator is easy and quick to use. The clear, organised dashboard makes it easy for you to find saved and/or completed projects. If the roof situation is known, the calculator will automatically generate proposals based on that situation and the most commonly used solar panels. The calculator has also been optimised for Google Maps.

- Easy and quick to use
- Shows all of your projects in one clear overview
- Automatically generates proposals based on the roof situation at hand and the most commonly used solar panel
- Including auto-fill option
- Optimised for Google Maps

## Warranty

ClickFit EVO meets all of the requirements and standards that currently apply. ClickFit EVO comes with a unique 25-year warranty, thus ensuring the system's quality

- Use of premium high tech materials
- Extensively tested
- 25 years' warranty

## **MAKE THE CONNECTION WITH ESDEC**

Esdec has been developing, producing, and supplying professional roof-mounting systems for solar panels since 2004. ClickFit and FlatFix are inspired by all installers who regularly install solar panels. Easy, fast, reliable installation using innovative, high-quality, durable mounting systems: Esdec makes it possible.
